Let’s take a look at those genomes.
All recent isolates are highly related, between 0 to 5 SNPs.
The 2008 isolate was between 27 to 31 SNPs from the other isolates.
2008 & 2018

Average of 30 SNPs between outbreaks.
2008 & 2018
Average of 30 SNPs between outbreaks.

Average of 30(ish) SNPs between outbreaks.
We know how you came in...
But why did you stay?
BIOFILM
Is there something special about *Salmonella* Montevideo?
Arizona rarely tests food handlers.
What is the value of testing non-food contact surfaces?
Why hasn’t this happened at other chicken-specific restaurants?
“I'm sorry, it's salmonella.”
