To Whom It May Concern:

On May 24, 2017 OraSure Technologies, Inc. announced the discontinuation of the OraSure HIV-1 Western Blot for oral fluid samples collected with the OraSure HIV-1 Oral Specimen Collection Device. The Collection Device is not affected and will continue to be available.

The Avioq HIV-1 Microelisa System is the only approved test with a claim for oral fluid samples using the Oral Fluid Collection Device from OraSure.

Although labs using the oral fluid Western Blot will be impacted by this discontinuation of a FDA approved confirmatory test, and will have to validate an alternative solution, Avioq wants to assure you that the HIV-1 Microelisa System kit will continue to be available.

Regards
